Supply Control For Lean Construction

**CSB Logistics:
Passionate about
service excellence
and continuous
improvement.**

CSB's proactive mindset and constant communication with onsite project teams has been crucial to maintaining the efficient 'pull system' of equipment to site with reliable Just-In-Time site deliveries.

CSB has added value in a number of ways, not least by checking quality and quantity of goods prior to site delivery, saving project delays and speeding up replacement procedures.

By applying a Lean Systems Thinking approach, CSB works to eliminate customers' waste costs and optimise productivity, while also improving the health, safety and environmental standards both onsite and throughout supply chains.

"CSB's Construction Logistics Centre is specifically designed to deal with the needs of specialist contractors," says Matt Barker. "Handling requirements such as large modular M&E systems, scenic lifts and 60' escalators is typical work for our professional handling team and the Centre's 30 tonne gantry cranes.

But our real qualities go beyond the physical: the extreme care and thought we apply to our work; the agility in response to urgent and changeable situations; the can-do attitude. These are what our customers trust in."

Only the Best for One Hyde Park...

Only the best will do for London's most prestigious project, One Hyde Park, that's why CSB Logistics was chosen to provide essential supply logistics support for specialist contractors Crown House Technologies and ThyssenKrupp Elevators.

Supply Logistics support to One Hyde Park.

CSB's Construction Logistics Centre was selected by Crown House Technologies in January 2009 to consolidate mechanical and electrical (M&E) equipment for Candy & Candy's prestigious One Hyde Park project and to provide a variety of logistics support services. Highly respected throughout M&E, elevation and envelope sectors of construction, CSB has proved to be the ideal partner.

"CSB is a specialist in construction logistics and we often get involved with high profile projects such as Heathrow Terminal 5 and the Olympic Stadium" says Matt Barker, MD of CSB Logistics.

"One Hyde Park has been described as the best project in the world and I'd have to agree. We love being involved in a project that isn't prepared to sacrifice quality for price.

When hard earned reputations are on the line it's great to think that these industry leaders trust us to provide the support services they need to deliver such prestigious projects."

CSB Logistics is currently working to attain ISO9001:2008 certification; the internationally recognised standard for an organisation's internal Quality Management.
